Tips and Tricks Try using Elements' Crop and Straighten Tool There are a few different ways to crop an image, but using the Crop and Straighten tool is quick and easy and works for most types of images. You can find the tool under the Crop tool. To crop a rectangular area, make sure that both options under the Crop button are selected and click the crop button. To crop an area while staying on the Smart Object, make sure that both options under the Crop button are selected and click the Smart Object icon. If you are cropping a photo from a Stack, make sure both the Crop to Selection and Crop to Vector are selected, and click the crop button. When you use the Crop and Straighten tool, the tool automatically selects the intersection of the crop box. This means that you can crop an image without any hassle. If you want to crop a specific area of the image, hold down the Alt or Option key, and the crop box will only show the cropped area. Now you can trim and straighten the image, just like in Photoshop. The crop box will move when you drag it, so you can make sure the image is cropped the way you want before trimming. You can trim the left, right, top and bottom of the image, as well as crop the width and height. Be sure to click the crop box before you press the Trim button to automatically crop the image. Create some Backgrounds You can use the New Document button to create a new file. However, there are many other ways to create a new image [388ed7b0c7](#)
